EXPERIENCE

Genesys Softwares — Software Engineer

August 2021 - Present

BCMC College of Engineering & Technology — Lecturer

January 2019 - January 2021

Shopify & Frontend Engineer (4+ Years) specializing in high-conversion ecommerce storefronts, Shopify Plus, and custom theme & app development. Experienced in CRO-driven UI, performance optimization, metafields/metaobjects architecture, checkout logic, and scalable frontend systems using Liquid, JavaScript, Vue, Nuxt, React, and Hydrogen.

Strong focus on building custom upsell, bundle, and cart/checkout logic without relying on heavy apps, ensuring fast, scalable, and maintainable storefronts. Proven track record of delivering revenue-impacting features for high-traffic Shopify stores.

Athletes Thread

#Built and scaled a Shopify Plus storefront with 150k+ products, leveraging metaobjects and metafields to power dynamic university, athlete, and sport-based pages. Developed a custom Shopify app for advanced filtering, significantly improving product discoverability and user experience, while optimizing collection rendering and frontend logic for high-traffic performance and long-term maintainability.

Happy Campers GF

#Designed and implemented checkout enforcement logic to ensure cart value thresholds, reducing invalid checkouts and improving purchase completion rate through controlled funnel behavior.

Enthuzst

#Created Shopify features with a dynamic countdown, real-time entry calculation, and interactive rewards tied to customer accounts.

#ForHerByArisha

#Developed a high-converting “Build Your Bundle” page for a homemade Japanese food store using fully custom Liquid and JavaScript without relying on heavy apps. Implemented custom upsell and bundle logic, enhanced site structure with sitelinks, and performed SEO optimizations that improved overall CRO and user engagement.

Pengine

#Developed bulk product upload and analytics dashboard with optimized Vue-based rendering.

Taskgrid

#Built task management system frontend using Nuxt.js with filters, statistics, and intuitive dashboards.

Campus Automation

#Created reusable Vue components for admin, teacher, and student dashboards.

SKILLS

Programming language:

JavaScript, Typescript, Liquid,
Python, C, C++

Frameworks and Libraries:

Vue.js, Nuxt.js, React.js,
Next.js, Node.js, Hydrogen

Database Technologies:

PostgreSQL, MongoDB

Development Tools: Git,

GitHub, GitHub Actions,
Docker

Cloud Services: AWS (S3,

Lambda, EC2, ECR, Elastic
Beanstalk)

ACADEMIC RESEARCH

An enhanced image encryption technique combining genetic algorithm and particle swarm optimization with chaotic function,” *International Journal of Computers and Applications*, 2019.
